

Executive Summary

Decathlon Sales Analysis

Business Objective

Decathlon is a global sporting-goods retailer offering products across a wide range of sports and recreational activities. With a diverse product portfolio and customer base, understanding sales performance, order trends, customer behaviour, sports-wise contribution, and retention is essential for sustainable business growth.

The primary objective of this analysis is to answer the following business questions:

- What is the total sales revenue generated by the business?
- How many orders and customers contribute to overall sales?
- How has sales, order volume, and customer base changed year-over-year?
- Which sports types contribute the highest sales and order volume?
- How do sales fluctuate throughout the year?
- Which product categories contribute most to overall sales?
- What is the customer retention rate?
- How is sales contribution distributed across genders?
- Which sports and customer segments present opportunities for further growth?
- What strategies can help improve revenue, customer retention, and overall business performance?

Key Performance Indicators (KPIs)

KPI	Value
Total Sales	₹36.7 Crore
Total Orders	30,000
Total Customers	8,998
Average Order Value	₹12,235.82
Customer Retention Rate	64.58%
YoY Sales Growth	+40.8%
YoY Order Growth	+40.1%
YoY Customer Growth	+13.5%
YoY AOV Growth	+0.5%

Executive Insights

1. Strong Revenue & Order Growth

Decathlon generated approximately **₹36.7 Cr in sales through 30,000 orders**, supported by a customer base of **8,998 customers**. Sales increased by **40.8% YoY**, while order volume increased by **40.1%**, reflecting strong business expansion and customer demand.

Business Insight

The strong growth in sales and order volume indicates healthy business momentum. However, the relatively modest **13.5% growth in customers** suggests that increasing purchase frequency and customer value may be important contributors to overall growth.

2. Revenue Growth is Volume-Driven

Average Order Value stands at approximately **₹12,235.82**, with only **0.5% YoY growth**. In comparison, sales and orders have grown by more than 40%.

Business Insight

The difference between order growth and AOV growth suggests that the increase in revenue is primarily driven by **higher transaction volume rather than significantly higher spending per order**. Cross-selling, upselling, product bundling, and premium product recommendations can help increase AOV.

3. Sports Performance

Cycling is the strongest sports type, generating approximately **₹8.1 Cr in sales from 3,139 orders**. Outdoor follows with approximately **₹4.1 Cr from 3,020 orders**, while Running generated approximately **₹3.5 Cr from 3,151 orders**.

Business Insight

Cycling represents a major revenue opportunity and should receive continued attention in terms of product availability, promotions, and category expansion. Meanwhile, Running's high order volume compared with its revenue indicates an opportunity to improve monetization through cross-selling and premium product offerings.

4. Customer Retention

The overall **customer retention rate stands at 64.58%**, indicating that a significant proportion of customers continue to purchase from the business.

Business Insight

Maintaining strong customer retention can support recurring revenue and increase customer lifetime value. Loyalty initiatives, personalized promotions, and targeted communication can further encourage repeat purchases.

5. Gender Analysis

Sales contribution is almost equally distributed between male and female customers, with both segments contributing approximately **50% of total sales (rounded off)**. However overall Male contributes slightly more than Female (Male:18.4 Cr and Female: 18.3 Cr)

Business Insight

The balanced contribution indicates that Decathlon has a diversified customer base without significant dependence on one gender segment. Marketing and product strategies should therefore continue to address both segments while using behavioural data to identify more specific customer preferences.

6. Monthly Sales Performance

Monthly sales remain relatively consistent throughout the year, with fluctuations across individual months. The trend indicates periods of stronger and weaker customer demand.

Business Insight

Understanding monthly demand patterns can help optimize **inventory planning, promotional campaigns, product availability, and marketing investments** around periods of changing customer demand.

7. Product Category Performance

The product-category analysis indicates varying contributions across different categories, highlighting differences in customer demand and revenue generation.

Business Insight

High-performing categories should receive priority in inventory planning and promotional strategies, while lower-performing categories can be evaluated for assortment optimization, targeted offers, and improved product positioning.

Strategic Recommendations

Sales Growth

- Increase cross-selling and upselling opportunities to improve revenue per order.
- Develop product bundles around high-demand sports such as Cycling, Outdoor, and Running.
- Use seasonal campaigns to capitalize on monthly demand fluctuations.
- Promote complementary products alongside high-volume purchases.

Product Strategy

- Prioritize inventory for high-performing sports and product categories.
- Evaluate lower-performing categories to identify opportunities for assortment optimization.
- Introduce premium products and bundles to increase Average Order Value.
- Use category-level sales trends to improve inventory allocation.

Customer Growth & Retention

- Develop loyalty and rewards programs to encourage repeat purchases.
- Personalize promotions based on customer purchasing behaviour.
- Use targeted email and remarketing campaigns to increase repeat orders.

- Focus on converting existing customers into higher-value repeat purchasers.

Revenue Optimization

- Focus on increasing AOV since current AOV growth is only **0.5% YoY**.
- Introduce relevant cross-category recommendations during the purchase journey.
- Promote premium and complementary products in high-volume categories.
- Identify customer segments with higher spending potential and target them with personalized offers.

Business Impact

This analysis enables business stakeholders to:

- Monitor overall sales and order performance.
- Track YoY growth across sales, orders, customers, and AOV.
- Identify high-performing sports and product categories.
- Evaluate monthly sales trends and demand fluctuations.
- Understand customer retention and demographic contribution.
- Identify opportunities to improve Average Order Value.
- Strengthen customer retention and repeat purchasing.
- Improve inventory and promotional planning.
- Support data-driven decisions for revenue and customer growth.

By consolidating **sales, order, customer, sports, retention, and demographic performance**, the analysis provides actionable insights that can support revenue growth, customer engagement, and long-term business sustainability.

Conclusion

Decathlon's sales analysis demonstrates **strong business growth, with sales increasing by 40.8% and orders by 40.1% YoY**. Cycling emerges as the leading sports type by revenue, while Running demonstrates strong transaction volume. The **64.58% customer retention rate** provides a solid foundation for recurring business, while the balanced male-female sales contribution reflects a diversified customer base.

The key opportunity lies in converting **volume-led growth into higher customer value**. With AOV growing by only 0.5%, Decathlon can strengthen future performance through cross-selling, upselling, premium product offerings, targeted promotions, customer loyalty initiatives, and category-specific strategies.

By leveraging these insights, management can make more informed decisions regarding **product strategy, inventory planning, customer retention, promotional activities, and revenue optimization**, ultimately supporting sustainable growth and stronger customer lifetime value.
